CITATION	Schroeder, M. 1992 Examination of Desert Tortoise Burrows Using a Miniature Video Camera. Proceedings of the Symposium of the Desert Tortoise Council.
ABSTRACT	Examination of desert tortoise burrows in winter, previously relied on the use of fiberoptic scopes. The prohibitive cost and the limited visibility of long fiberoptic scopes provided the impetus for the development of an alternative method. The new method consists of a miniature camera (thumb size) attached to a standard camcorder with a 30 foot long cable. The new system is cheap, durable and has produced high quality field results.
